Advancing the research and academic mission of Florida International University

DOE-FIU Cooperative Agreement Annual Research Review – FIU Year 2

PROJECT 1 Chemical Process Alternatives for Radioactive Waste

Advancing the research and academic mission of Florida International University

FIU Personnel and Collaborators

Project Manager: Dwayne McDaniel

Faculty/Staff: Amer Awwad, Anthony Abrahao, Aparna Aravelli, Jose Rivera, Shervin Tashakori, Mayren Echeverria Boan, Mackenson Telusma

DOE Fellows/Students: Jeff Natividad, Sebastian Story, Joel Adams, Brendon Cintas, Josue Martinez,

Raymond Piloto, Desmond Sinnott, Nicholas Espinal

DOE-EM: Genia McKinley, Robert Seifert, Latrincy Bates, Kurt Gerdes, Jean Papon

DOE-ORP: Erik Nelson

SRNL: Michael Poirier, Connie Herman, Bruce Wiersma, Jean Plummer, Christine Langdon, William

Wells, Mark Kranjc, Eric Skidmore

PNNL: Kayte Denslow, Carl Enderlin, Matt Fountain, Matthew Asmussen

WRPS: Jason Gunter, Kayle Boomer, Glenn Soon, Joe Rice, Doug Reid, Jason Page, Ruben Mendoza **SRS:** Jane Carter, Saiying Bowers

Task 17: ADVANCED TOPICS FOR HLW MIXING AND PROCESSES

Subtask 17.2 Evaluation of Pipeline Flushing Requirements for HLW at Hanford and Savannah River Site

TASK 18: TECHNOLOGY DEVELOPMENT AND INSTRUMENTATION EVALUATION

Subtask 18.2 Development of Inspection Tools for DST Primary Tanks

- Subtask 18.3 Development of a Coating Deployment Platform for the H-Canyon Exhaust Tunnel
- **Subtask 18.4** Long-Term Surveillance of Nuclear Facilities and Repositories using Mobile Systems

TASK 19: PIPELINE INTEGRITY AND ANALYSIS

- Subtask 19.1 Pipeline Corrosion and Erosion Evaluation
- Subtask 19.2 Evaluation of Nonmetallic Components in the Waste Transfer System

TASK 20: CORROSION PROTECTION AND CHARACTERIZATION OF EM INFRASTRUCTURE

Subtask 20.1 Evaluation of Coatings for the H-Canyon Exhaust Tunnel

Subtask 20.2 Corrosion Evaluation of Steel Canisters for Hanford Integrated Disposal Facility

Advanced Topics for HLW Mixing and Processes

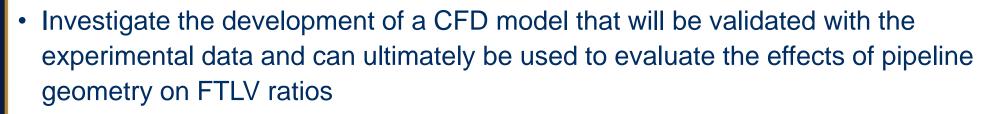

Applied Research Center

Subtask 17.1: Evaluation of pipeline flushing requirements for HLW at Hanford and Savannah River Site

FIU Year 2 Research Highlights & Accomplishments:

- Completed the construction of the 330 ft flushing loop
- Improvements to instrumentation and real-time analysis
- Initiated flushing tests for fully flooded and gravity drained configuration
 - 10 vol.% and 15 vol.% fully-flooded
 - 10 vol.% and 15 vol.% gravity-drained
- 2.4-2.6 FTLV values for trials

- Complete 330 ft tests
- Expand loop to 495 ft and initiate testing
- Analyze the data to determine the effects of pipe length of FTLV ratios

Technology Development and Instrumentation Evaluation

Subtask 18.2: Development of Inspection Tools for DST Primary Tanks

FIU Year 2 Research Highlights & Accomplishments:

- Mini rover
 - Successfully deployed in the AP-105 DST at Hanford in March 2022.
 - Transferred ownership of the unit to WRPS
- Lateral Gamma Scanner for SSTs
 - The overall design was also streamlined, and the inspection process was completely automated.
 - System was deployed at Hanford's CTF in July of 2022.
- Off Riser Sampler
 - In the Summer of 2022, FIU and WRPS demonstrated the potential of using robotic manipulators to perform off-riser sampling in high-level waste tanks.

FIU Year 3 Projected Scope

Mini rover

- Enhance inspection capabilities by integrating a sampling arm and potentially an ultrasound sensor.
- Implement computer vision techniques to reconstruct refractory channel 3D models.

Lateral Gamma Sensor

- Integrate gamma radiation sensor.
- Enhance localization by adding visual and inertial odometry fused to tether length
- Strengthen the gripper module.
- Streamline automated inspection routine.

Off-Riser Sampler

- Integrate tool changers and develop innovative end-effector tooling and samplers.
- Create a more natural interface with the operator.
- Deploy in summer at WRPS's Cold Test Facility.

Subtask 18.3: Development of a Coating Deployment Platform for the H-Canyon Exhaust Tunnel

FIU Year 2 Research Highlights & Accomplishments:

- Sand ingestion testing small grain size did not have significant effect on thrust generation, blade degradation was minimal.
- Support arm developed 3DOF arm for supporting unit and compensated for reaction forces in coating process.
- Platform carbon fiber chassis was fabricated, control box was redesigned to minimize weight, controls were improved for surface-to-surface transitioning.
- Coating mechanism designed and initially testing with water at 2000 psi.

FIU Year 3 Projected Scope

- Platform development complete design of vector thrust system, develop electronic package to reduce weight, develop power distribution system, incorporate semi-autonomous capabilities for surface transitioning.
- Coating system incorporate coating company requirements into coating system, begin initial testing on coating system.
- Testing Develop initial design of tunnel mock-up which will be used for the testing of the wall crawling platform.

Applied Research Center

Subtask 18.4: Long-Term Surveillance of Nuclear Facilities and Repositories using Mobile Systems

FIU Year 2 Research Highlights & Accomplishments:

- Continue improving FIU's autonomous mapping and surveillance framework by integrating algorithms to enhance:
 - Robust navigation for mapping extensive indoor environments minimizing dead reckoning drifts in monotonous GPS-denied facilities fusing several sources of odometry estimation.
 - Risk awareness by improving existing obstacle avoidance algorithms considering terrain features and conditions.
- This task also supported other DOE-EM tasks by providing algorithms, localization strategies, sensor integration, and modeling of robotics systems.

FIU Year 3 Projected Scope

- Streamline FIU's autonomous surveillance framework and establish routines for autonomous outdoor surveillance.
- Enhance onboard terrain risk-awareness framework and implement information-driven planning and control algorithm.
- Investigate integrating ammonia sensor.
- Retrofit a Robotic platform provided by WRPS.
- Deploy in summer at WRPS's Cold Test Facility.

Applied Research Center

Pipeline Integrity and Analysis

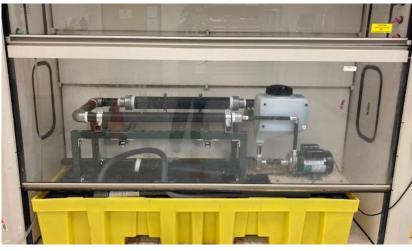

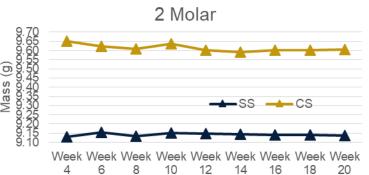

Subtask 19.1: Pipeline Corrosion and Erosion Evaluation

FIU Year 2 Research Highlights & Accomplishments:

- Conducted corrosion testing loop in 2- and 3-inch pipe sections.
- Corrosion chemical Simulants NaOH, AI(NO₃)₃*9H₂O, Na₂SO₄, Na₂CO₃*H₂O, NaNO₃, NaNO₂ and NaCI
- CFD analysis of loop
- Initiated automated corrosion detection using machine learning models

- Continue testing the SRNL mass loss coupons using realistic simulants developed by SRNL
- Investigate the effect of simulant flow dynamics in structural integrity assessment using computational fluid dynamic simulations
- Use the experimental sensor data and simulation results to develop machine learning models and predict the remaining useful life of tanks and transfer system components

Subtask 19.2: Evaluation of Nonmetallic Components in the Waste Transfer System

FIU Year 2 Research Highlights & Accomplishments:

- An additional aging system that included four test loops were fabricated that circulated NaOH solutions of 25%, 12.5%, 6.25%, and 0% respectively at 170°F.
- Specimens were aged for 1-year and hose burst pressure tests and dog-bone tensile strength measurements for obtained.
- SEM analysis was conducted.

- Investigate fundamental aspects of aging and mechanisms of failure
 - This includes wettability and stress risers on the EPDM material
 - Provide and understanding of why the greatest material degradation occurs at the lowest (6.25%) NaOH concentrations.
- Investigate aging and testing of the Viper[®] hose used at SRNL.
 Provide a technical basis for the Viper hose use.

Aging Type	Average Burst Pressure (MPa)	% Change
Baseline (Unaged)	20.71	0.00
Water Only	12.30	-40.61
6.25%	15.29	-26.17
12.50%	16.90	-18.41
25%	19.40	-6.32
Aging Type	Average Tensile Strength (MPa)	% Change
Aging Type Baseline (Unaged)		% Change 0.00
	Strength (MPa)	
Baseline (Unaged)	Strength (MPa) 7.70	0.00

Corrosion Protection and Characterization of EM Infrastructure

Subtask 20.1: Evaluation of Coatings for the H-Canyon Exhaust Tunnel

FIU Year 2 Research Highlights & Accomplishments:

- Potential coatings for the protection of the tunnel concrete walls were identified.
- Carboline and Belzona coated samples initiated with the accelerated aging process and preliminary evaluation was completed.
- Impedance measurements supported the evaluation of the coating's protective properties.

- Continue evaluation of potential coatings through accelerated aging tests.
- Initiate the evaluation of Sherwin-Williams coated samples.
- Study the effect of key variables on the coating's performance.
- Coordinate the preparation of Framatome coated samples at their facilities.
- Perform surface characterization on selected coated samples.

Thickness loss (%), Day 35	Carboline samples	Belzona samples
With surface prep.	10-11	7.4 - 20
No surface prep.	10-14	15 - 23

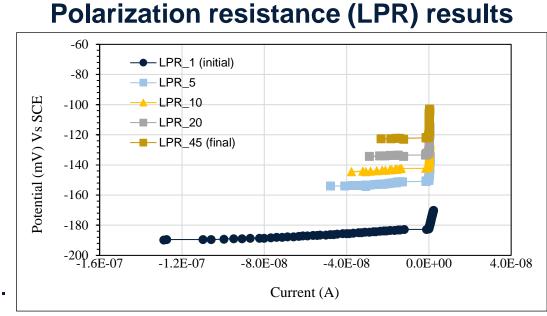

Applied Research Center

Subtask 20.2: Corrosion Evaluation of Steel Canisters for Hanford Integrated Disposal Facility

FIU Year 2 Research Highlights & Accomplishments:

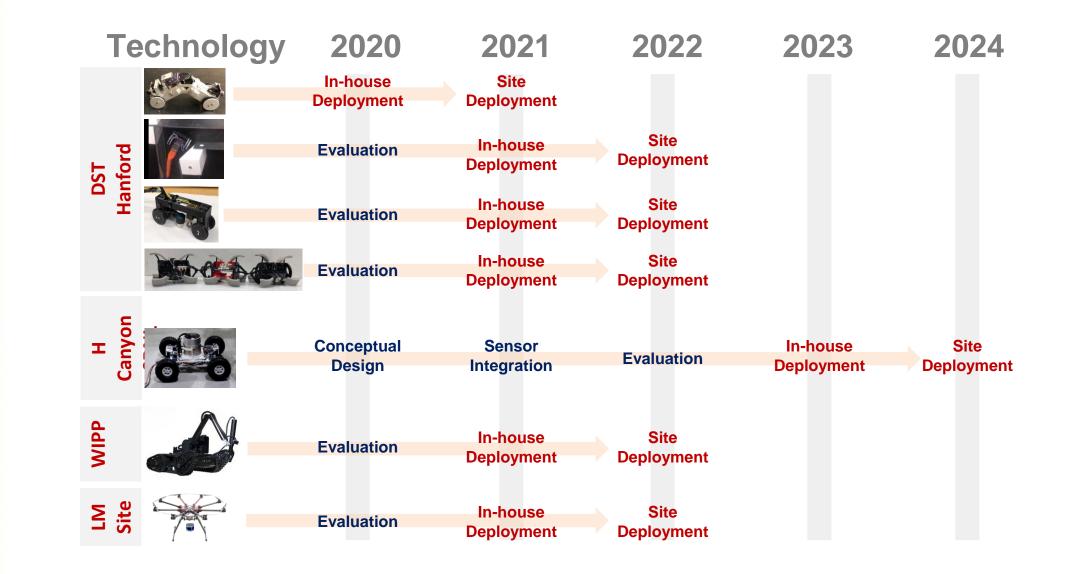

- Faraday cage for electrochemical measurements designed and built.
- Initial samples of 304 SS prepared for the testing.
- The potentiostat was setup and overload issues of the potentiostat were resolved.
- Preliminary corrosion data for 304 SS samples immersed in Hanford simulated groundwater were obtained through electrochemical tests (Ecorr, LPR and PDP).

- Continue the evaluation of 304 stainless steel.
- Study the effect of weld regions on the corrosion behavior.
- Study the effect of heat treatment zones on the corrosion behavior.
- Study the effect of certain ions on the corrosion process.
- Obtain and analyze the corrosion data obtained using analytical software.
